PRIORITY RESPONSE

Videoguard

Videoguard alarm systems consist of the same components as any other alarm system. What makes our system unique is the fact that we have a built-in camera inside an alarm passive which will send a video clip to the control centre with every alarm notifications.

All of our equipment is wireless with 868Mhz Bi-directionally spread spectrum communication between the panel and each device. Manufactured with the latest technology and heavy duty plastics, this range is of the highest quality, durable and superior to all related products currently available on the market.

**Outdoor >
MotionViewer™**

**< Indoor
MotionViewer™**

What we do

We now have the power to verify all alarm signals in the control room. Not only to resolve the countries false alarm dilemma but to prioritise reaction forces to our customers.

The small video clip sent with every alarm signal allows our operators access to hands on information of the actual incident (number of suspects, armed, etc.)

LIVE ACTION, PLAY BY PLAY!

Each alarm may be analysed and the correct amount of assistance (Armed Response, Reaction Officers, Police as well as Ambulances) may be dispatched.

Advantages

The Videoguard system provides:

- **Quick Installation** – settings setup happens off-site, minimising our team's presence and their interaction with your staff (added security benefit)
- **Flexibility** – it's wireless, so we can install it anywhere and with a battery life of more than a year, it is immune to power cuts and cable damage
- **Full Visual on site** – should an alarm be activated all other camera-passives on site will automatically begin to record the perimeter as well
- **Immediate Verification** – verify the incident within seconds
- **Quicker Response** – immediate activation of response teams
- **Evidence** – is easily collected and stored to be submitted for police reports and further investigations
- **Easy access to information** – customers may be notified in the form of email or sms
- **Tamper-Proof Function** – the system will send through an alarm of any tampering / masking of lens / disconnection that may occur
- **Auto Faulty Alert** – the cameras automatically report back to our control centre (every 65 minutes) to ensure their functionality
- **Easy to hide** – no infrared lights = less detectable
- **Durability** – heavy duty materials used for protection against the elements (sun, wind, rain)
- **Security Guard Function** – Videoguard will "patrol" your premises once an hour, without interruption and at a fraction of the cost.

Cost

The Videoguard is available at the special rate of R1260.00* per month Additional cameras may be added to this equipment at the minimal cost of R250.00* per month thereafter.

**Prices are exclusive of VAT. Terms and Conditions apply.*
